

ABSTRACT OF THE DISCLOSURE

A stacked coil device comprising: an inner electrode layer formed of at least two parts [[layers]] and having a non-magnetic electrode region [[layer]] and an inner magnetic region [[layer]] formed as one layer [[unit]], the non-magnetic electrode region [[layer]] being provided with an opening at a center thereof and provided with an electrode pattern on at least one surface of an upper surface and a lower surface thereof and the inner magnetic region [[layer]] positioned at the center opening and a lateral surface of the non-magnetic electrode region [[layer]]; a cover layer in contact with both surfaces of the inner electrode layer; and an external electrode terminal ~~partially and~~ electrically connected to the electrode pattern.
